Advanced Turbocharged Direct Injected Gasoline Engines...

Gasoline direct injection, also known as petrol direct injection, is a mixture formation system for internal combustion engines that run on gasoline, where fuel is injected into the combustion chamber. This is distinct from manifold fuel injection systems, which inject fuel into the intake manifold. The use of GDI can help increase engine efficiency and specific power output as well as reduce exhaust emissions. The first GDI engine to reach production was introduced in 1925 for a low-compression
