Limnology is the study of surface waters that are located inland. Inland surface waters include lakes, ponds, springs, creeks, streams, rivers, estuaries and wetlands. Limnology encompasses both fresh and salty water bodies. Limnology, however, does not include groundwater for obvious reasons; groundwater is not on the surface!

Limnology: Lake and River Ecosystems, Edition 3 by Robert ...

Polar lakes and rivers encompass a diverse range of aquatic habitats, and many of these environments have broad global significance. This introduction to polar aquatic ecosystems presents a summary of the history of lake research in the Arctic and Antarctica, an overview of the limnological diversity within the polar regions, and descriptions of high-latitude rivers, lakes, and lake districts where there have been ecological studies.
