What makes women sick? To an Ecuadorean woman, it's nervios from constant worry about her children's illnesses. To a woman working in a New Mexico electronics factory, it's the solvents that leave her with a form of dementia. To a Ugandan woman, it's HIV from her husband's sleeping with the widow of an AIDS patient. To a Bangladeshi woman, it's a fatal infection following an IUD insertion. What they all share is a recognition that their sickness is somehow caused by situations they face every day at home and at work.

An eye-opening look at Israeli women's life expectancy and health.

"A trailblazing conversation-starting history of women's health-from Ancient Greece to hormones and autoimmune diseases-brought together in a fascinating sweeping narrative"--

In this shocking, hard-hitting expose in the tradition of Naomi Klein and Barbara Ehrenreich, the editorial director of Feministing.com, reveals how inadequate, inappropriate, and even dangerous treatment threatens women's lives and well-being. Editor of the award-winning site Feministing.com, Maya

Dusenbery brings together scientific and sociological research, interviews with experts within and outside the medical establishment, and personal stories from women across the country to provide the first comprehensive, accessible look at how sexism in medicine harms women today. Dusenbery reveals how conditions that disproportionately affect women, such as autoimmune diseases, chronic pain conditions, and Alzheimer's disease, are neglected and woefully under-researched. "Contested" diseases, such as fibromyalgia and chronic fatigue syndrome, that are 70 to 80 percent female-dominated are so poorly understood that they have not yet been fully accepted as "real" conditions by the whole of the profession. Meanwhile, despite a wealth of evidence showing the impact of biological difference between the sexes in everything from drug responses to symptoms to risk factors for various diseases—even the symptoms of a heart attack!—medicine continues to take a one-size-fits-all approach: that of a 70 kilogram white man. In addition, women are negatively impacted by the biases and stereotypes that dismiss them as "chronic complainers," leading to long delays—often years long—to get diagnosed. The consequences are catastrophic. Offering a clear-eyed explanation of the root causes of this insidious and entrenched bias and laying out its effects, *Doing Harm* will change the way we look at healthcare for women.

Kaja Finkler explores the relationship between patterns of social interaction, cultural expectations, and gender ideologies. In *Women in Pain*, she examines the nature of sickness and its interaction with issues about gender and gender relations from both a historical and contemporary perspective.

Data is fundamental to the modern world. From economic development, to healthcare, to education and public policy, we rely on numbers to allocate resources and make crucial decisions. But because so much data fails to take into account gender, because it treats men as the default and women as atypical, bias and discrimination are baked into our systems. And women pay tremendous costs for this bias, in time, money, and often with their lives. Celebrated feminist advocate Caroline Criado Perez investigates shocking root cause of gender inequality and research in *Invisible Women*, diving into women's lives at home, the workplace, the public square, the doctor's office, and more. Built on hundreds of studies in the US, the UK, and around the world, and written with energy, wit, and sparkling intelligence, this is a groundbreaking, unforgettable exposé that will change the way you look at the world.

Essential reading for our times, as women are pulling together to demand their rights— A landmark portrait of women, men, and power in a transformed world. "Anchored by data and aromatized by anecdotes, [Rosin] concludes that women are gaining the upper hand." —The Washington Post Men have been the dominant sex since, well, the dawn of mankind. But Hanna Rosin was the first to notice that this long-held truth is, astonishingly, no longer true. Today, by almost every measure, women are no longer gaining on men: They have pulled decisively ahead. And "the end of men"—the title of Rosin's Atlantic cover story on the subject—has entered the lexicon as dramatically as Betty Friedan's "feminine mystique," Simone de Beauvoir's "second sex," Susan Faludi's "backlash," and Naomi Wolf's "beauty myth" once did. In this landmark book, Rosin reveals how our current state of affairs is radically shifting the power dynamics between men and women at every level of society, with profound implications for marriage, sex, children, work, and more. With wide-ranging curiosity and insight unhampered by assumptions or ideology, Rosin shows how the radically different ways men and women today earn, learn, spend, couple up—even kill—has turned the big picture upside down. And in *The End of Men* she helps us see how, regardless of gender, we can adapt to the new reality and channel it for a better future.

A feminist manifesto exposing the everyday sexism that teenage girls face.

In this book, Naila Kabeer brings together a set of arguments, findings and lessons from the development literature which help to explain why gender equality merits specific attention from policy-makers, practitioners, researchers and other stakeholders committed to the pursuit of pro-poor and human-centred development. Neglect of gender inequalities in the distribution of resources, responsibilities and power in the processes of economic accumulation and social reproduction has a high cost, not only for women themselves but also for their children and other dependents and for the development of society as a whole. This book highlights the interconnections between production and reproduction within different societies, and women's critical role in straddling both, and points to the various synergies, trade-offs and externalities which these generate.
